Gapura Angkasa

For a truly luxurious room arrangement, the **Sakura Glass** booth system is the perfect choice, **Sakura Glass** is built with clear tempered glass (10 mm) with doors, dividers, and partitions made from frit tiles. Adjustable height adjustable feet with friction clips allow for variable floor cleaning. Doors and pillars stand out against the background of the overhead stabilizer rails, giving the system an almost borderless appearance.

The **Sakura Custom** developed for the refurbishment market. This type consist of durable panels and tamper proof fittings. The small number of accessories and profiles of the range, enables fast and efficient installation. Using 12mm compact panels for the cubicle door, pilaster, integrated with sturdy stainless steel footing of its floor anchored system make **Sakura Custom** more robust.

The small number of accessories and profiles needed for this system enables fast and efficient installation. The system is anchored on the floor with a sturdy aluminum footing allowing the system to be stable and rigid. A compact 12 mm laminate board is used for cubicle and pilaster doors, an ordinary 12 mm board that allows the system to be stronger. The absence of poles and head rails in the **Sakura Wood** booth system results in an uninterrupted display of doors and pilasters, so that only the beautiful colors of the **Sakura Wood** laminate board are visible.

The **Sakura Bright** stainless steel fittings are hidden to prevent vandals from damaging the system and the material used is very durable and waterproof. Mohair strips attached to pilasters dampen the noise generated from the constant opening and closing doors. The **Sakura Bright** booth system provides exceptional heavy duty use and looks as good as it can be relied upon.

The **Sakura Dark** booth system offers easy installation, with a relatively short amount of time needed to set it on site. Adjustable ground rosste on aluminum feet also allows for variable uneven or sloping floor heights. Designed at a price that allows quality rooms to be placed in all types of buildings, **Sakura Dark** provides excellent and economical value.

GOR Serpong Project

Sakura Movable Partition (also known as sliding partition) are typically floor to ceiling partitions or panels that can be adjusted to change spatial arrangements. The purpose of movable partition is generally to transform a single space into multiple smaller spaces with minimal effort. They can divide for example a school hall into different multi-purpose areas for simultaneous physical activities, or split a large conference facility into smaller seminar rooms. When they are not needed, the partitions are folded, moved or concealed in a space efficient manner. Not only in the school, so many building use movable partition for meeting rooms, conference rooms, or ball rooms for making the function of room more efficiently and usefully.

Sakura Movable Partition has three type of Panel. There are SK 65, SK 80, and SK 100. We already doing the movable partition in Tanjung Enim Project and GOR Serpong Project. We can supply, doing maintenance, service, and relocation of movable partition.
